"Scheffler, Linda", "Laura Jones", "MCCLINCY Matt", mcoover,

For our discussion tomorrow, I've listed a few specific questions below and expect there is also more discussion needed about some of the data use/grouping elements of the methodology.

1. In Carl's 6-7-08 Meeting Summary, #1 describes how dups/refs would be evaluated to determine that "no substantial reason for divergence" vs. a "substantial reason for divergence" exists? What is a non-substantial or substantial reason?
2. Will sediment trap data "inherit" whatever reclassifications result from the evaluation of the stormwater data?
3. Will additional sources of TSS data (other than those mentioned in the document) be used, e.g., NPDES data? Will grab sample data be considered or only composite/EMC data? [Based upon the importance of the TSS value in the solids calculation, I'm particularly concerned about how much leeway the methodology allows relative to how this data would be used.]

I also have a more general question relating to how this process unfolds once we get agreement on the general approach. The methodology includes a number of analyses that will provide information for making subsequent (and often subjective) decisions on how to proceed (e.g., reclassification; sources and use of TSS data, etc.). How will these subsequent decisions be made? Will they come back to Tech Team? It seems to me that we'd only be doing half of our job if the Team's input and endorsement of the approach was limited to this stage of the process.

Talk to ya'll tomorrow.

Karen

Subject: June 26 9 am Stormwater Tech
Team Call

Stormwater Tech Team -

This email is to confirm our group call on June 26 starting at 9 am and going approximately to noon (or as needed). Please use the following call in number:

Non Responsive

The main agenda items are:

- 1) to go over additional DEQ comments, which Karen indicated are probably likely
- 2) discuss EPA comments, if any.

The idea is to agree on any revisions to the methods before the call ends so that we can move forward with the full stormwater loading analysis.

Thanks.

Team Meeting

Kristine - I will provide a conf. call number. It is usually a good excuse to provide reminder a few days prior to the call date.

Thanks.

Carl

Next Stormwater Technical Team

Meeting

Stormwater Technical Team -

It looks like the best time for our next conference call is June 26th from 9 am to noon. Let's assume it's a conference call (instead of a meeting) unless major issues come up. I will keep you posted regarding any changes in status once comments start to come in.

Thanks much.

Carl
